WO 2004/095142 A1

(54) Title: RESIST COMPOSITION AND ORGANIC SOLVENT FOR REMOVING RESIST

(57) Abstract: The present invention provides a resist composition comprising benzyl alcohol or its derivatives as an organic solvent. The present invention also provides an organic solvent for removing a resist, wherein the organic solvent comprises benzyl alcohol or its derivatives. The resist composition of the present invention is used in a lithography process for forming a micro -pattern using a difference in the solubility between the irradiated part and the non-irradiated part by irradiation with UV rays to greatly improve the uniformity of the film thickness upon coating of the thin film. In addition, the organic solvent according to the present invention can be used to wash the device, which comes into contact with the photosensitive material in the course of the microcircuit forming process, by removing the photosensitive material from the device. It also can remove the photosensitive material remaining on the undesired parts of the substrate on which the photosensitive material is coated.
